

IRON UPTAKE and HOMEOSTASIS in MICROORGANISMS

Edited by: **Pierre Cornelis and Simon C. Andrews**

c. 300 pp., June 2010

ISBN 978-1-904455-65-3 \$319/£159

Published by: **Caister Academic Press** www.caister.com

Iron is essential for almost all living organisms as it is involved in a wide variety of important metabolic processes. However, iron is not readily available and microorganisms therefore employ various iron uptake systems to secure sufficient supplies from their surroundings. There is considerable variation in the range of iron transporters and iron sources utilised by different microbial species. Pathogens, in particular, require efficient iron acquisition mechanisms to enable them to compete successfully for iron in the highly iron-restricted environment of the host's tissues and body fluids.

In this book, an international team of authors presents a comprehensive collection of reviews on iron uptake and metabolism in various microorganisms including Rhizobia, *Bordetella*, *Shigella*, *E. coli*, *Erwinia*, *Vibrio*, *Aeromonas*, *Francisella*, *Bacteroides*, *Campylobacter*, Cyanobacteria, *Bacillus*, Staphylococci and yeasts. An entire chapter is dedicated to siderophores and another to heme uptake. The volume provides an expert and timely summary of current knowledge, with a focus on molecular and genetic aspects, and highlights some of the most exciting recent developments.

Aimed at research scientists, advanced students and other specialists, this book is highly recommended for everyone interested in iron uptake and metabolism, microbial pathogenesis and microbial ecology.

Table of Contents

www.caister.com

- Siderophores from Bacteria and from Fungi *Herbert Budzikiewicz*
- Heme Uptake and Iron Extraction by Bacteria *Cécile Wandersman*
- Mechanisms and Regulation of Iron Homeostasis in the Rhizobia *Mark R. O'Brian and Elena Fabiano*
- Iron Uptake Systems in Pathogenic *Bordetella* *Timothy J. Brickman and Sandra K. Armstrong*
- Iron Uptake in *Shigella* and *E. coli* *Shelley M. Payne and Alexandra R. Mey*
- Iron Uptake in Soft Rot *Erwinia* *Thierry Franza and Dominique Expert*
- Iron Uptake in *Vibrio* and *Aeromonas* *Manuel L. Lemos and Carlos R. Osorio*
- Iron Uptake in *Francisella* *Girja Ramakrishnan*
- Heme and Iron Metabolism in *Bacteroides* *Edson R. Rocha and C. Jeffrey Smith*
- *Campylobacter* Fur and PerR Regulons *James Butcher, Annika Flint, Martin Stahl and Alain Stintzi*
- Iron Dependency of and Transport by Cyanobacteria *Kerstin Nicolaisen and Enrico Schleiff*
- Iron Uptake in Gram-positive (*Bacillus*) *Ahmed Gaballa and John D. Helmann*
- Iron Uptake in Staphylococci *Michelle L. Reniere, Gleb Pishchany and Eric P. Skaar*
- Iron Uptake in Yeasts *Pierre-Louis Blaiseau, Alexandra Seguin, Jean-Michel Camadro and Emmanuel Lesuisse*

Two-Component Systems in Bacteria

Edited by: R Gross, D Beier
c. 410 pp, August 2012

ISBN: 978-1-908230-08-9, \$360/£180

Latest research on structure-function analysis, sensing mechanisms, atypical two-component systems, stress responses, developmental processes, virulence and symbiosis.

Foodborne & Waterborne Bacterial Pathogens

Epidemiology, Evolution and Molecular Biology

Edited by: SM Faruque
c. 330 pp, July 2012

ISBN: 978-1-908230-06-5, \$319/£159

Review topics such as pathogenic properties, population genetics, virulence genes, evolution, drug resistance, epidemiology, detection, identification and control strategies.

Yersinia

Systems Biology and Control

Edited by: E Carniel, BJ Hinnebusch
c. 240 pp, July 2012

ISBN: 978-1-908230-05-8, \$319/£159

Leading *Yersinia* researchers review the hot topics in the systems biology and control of these important bacteria.

Stress Response in Microbiology

Edited by: JM Requena
c. 500 pp, June 2012

ISBN: 978-1-908230-04-1, \$360/£180

Expert authors from around the world summarise the current knowledge on microbial stress response and comprehensively review the recent findings that have greatly advanced the understanding of stress response systems.

Bacterial Regulatory Networks

Edited by: AAM Filloux
c. 400 pp, June 2012

ISBN: 978-1-908230-03-4, \$360/£180

Authoritative, up-to-date reviews of the current research and theories on regulatory networks in bacteria. Critical reviews written by the leading research scientists in the field.

Systems Microbiology

Current Topics and Applications

Edited by: BD Robertson, BW Wren
c. 200 pp, June 2012

ISBN: 978-1-908230-02-7, \$319/£159

Cutting-edge reviews by world-leading experts on the systems biology of microorganisms. Includes theoretical approaches, mathematical modelling, case studies on microbial species and the systems analysis of microbial phenomena.

Quantitative Real-time PCR in Applied Microbiology

Edited by: M Fillion

c. 280 pp, May 2012

ISBN: 978-1-908230-01-0, \$319/£159

Aimed specifically at microbiologists, this volume describes and explains the most important aspects of current real-time quantitative PCR (qPCR) strategies, instrumentation and software.

Bacterial Spores

Current Research and Applications

Edited by: E Abel-Santos

c. 300 pp, April 2012

ISBN: 978-1-908230-00-3, \$319/£159

Comprehensive, up-to-date reviews on the current state of our knowledge of bacterial endospores. Essential text for everyone involved in spore research, the expression of recombinant proteins and pathogen detection.

Small DNA Tumour Viruses

Edited by: K Gaston

x + 324 pp, March 2012

ISBN: 978-1-904455-99-8, \$319/£159

Leading scientists from around the world review current hot-topics on small DNA tumour virus research providing a fascinating overview of their molecular biology and interactions with the host.

Extremophiles

Microbiology and Biotechnology

Edited by: RP Anitori

xiv + 300 (colour figures) pp, January 2012

ISBN: 978-1-904455-98-1, \$319/£159

Current and topical areas of extremophile research. The latest insights into the mechanisms these fascinating organisms use to survive and the most recent and novel biotechnological uses of extremophiles.

Bacillus

Cellular and Molecular Biology (2e)

Edited by: P Graumann

xii + 398 pp, February 2012

ISBN: 978-1-904455-97-4, \$360/£180

A valuable reference work providing a comprehensive and up-to-date analysis. Critical reviews on the most recent and topical research.

Microbial Biofilms

Current Research and Applications

Edited by: G Lear, GD Lewis

x + 228 pp, February 2012

ISBN: 978-1-904455-96-7, \$319/£159

An up-to-date review of the latest scientific research on microbial communities and a discussion of future trends and growth areas in biofilm-related research.

Bacterial Glycomics

Current Research, Technology and Applications

Edited by: CW Reid, SM Twine, AN Reid
x + 270 pp, February 2012

ISBN: 978-1-904455-95-0, \$319/£159

Up-to-date overview of our current understanding of bacterial glycomes, the main analytical methods and recent and novel applications.

Non-coding RNAs and Epigenetic Regulation of Gene Expression

Drivers of Natural Selection

Edited by: KV Morris

x + 216 pp, February 2012

ISBN: 978-1-904455-94-3, \$319/£159

An important and up-to-date overview of the modulation of gene transcription by non-coding RNAs. An essential reference book and a major information resource for those working in the area.

Brucella

Molecular Microbiology and

Genomics

Edited by: I López-Goñi, D O'Callaghan
x + 262 pp, February 2012

ISBN: 978-1-904455-93-6, \$319/£159

Highly acclaimed *Brucella* scientists comprehensively review the most important advances in the field. Topics include: genetic diversity, proteomic analysis, transcriptomic analysis, and much more.

Molecular Virology and Control of Flaviviruses

Edited by: P-Y Shi

x + 358 pp, January 2012

ISBN: 978-1-904455-92-9, \$360/£180

An up-to-date and cutting-edge anthology from the leading experts in the flavivirus field. Essential reading for flavivirus researchers at the graduate level and beyond.

"a valuable resource" (Doodys)

Bacterial Pathogenesis

Molecular and Cellular Mechanisms

Edited by: C Locht, M Simonet

x + 370 pp, January 2012

ISBN: 978-1-904455-91-2, \$360/£180

Distinguished scientists comprehensively describe the most relevant and up-to-date information on pathogenic features across the bacterial world.

"useful to those in many areas of research" (Doodys)
